

## ALUMINIUM & STEEL BALUSTRADE

Simple classical lines to add the finishing touch to your architecture.

A balustrade is an architectural barrier that is designed to provide a building occupant with safety from falling. Balustrades are typically used whenever there is a change in levels of 1.0m or more. Our balustrade products are designed from high quality materials, and designed to meet the stringent requirements of the New Zealand Building Code.

Even a fall from 2.0m can potentially be fatal. However, just because a balustrade is fulfilling such an important function, you don't need to sacrifice elegance and style.

Mr Fencer Aluminium & Steel Balustrades offer traditional styling that is both attractive and functional. With simple clean lines, varying handrail options and fixing methods, aluminium and steel balustrades are suitable in all architectural aesthetics and environments.

We offer a full design, manufacture and installation service of a wide variety of balustrade solutions.

### Applications for Aluminium & Steel Balustrade:

- Decks
- Stairways
- Balconies
- Handrails
- Pool Surrounds
- Boundary Fences
